

# DWA\_08 Discussion Questions

In this module you will continue with your “Book Connect” codebase, and further iterate on your abstractions. You will be required to create an encapsulated abstraction of the book preview by means of a single factory function. If you are up for it you can also encapsulate other aspects of the app into their own abstractions.

To prepare for your session with your coach, please answer the following questions. Then download this document as a PDF and include it in the repository with your code.

---

1. What parts of encapsulating your logic were easy?

Nothing was particularly easy.

---

2. What parts of encapsulating your logic were hard?

It was a bit difficult to modify already functional code. It also makes the code look more complex which didn't make much sense to me.

---

3. Is abstracting the book preview a good or bad idea? Why?

Its a good idea.

- Keeps the code clean and organised
  - The function can be reused to create book previews in other parts of the web page
  - Isolating the creation of the book preview from the rest of the code helps with testing
  - The data cannot be accessed from outside the function and so it helps with security if the function contains sensitive/private data etc.
